

Profile of a meth addict

Addiction to cocaine or meth is powerful. Addicts will commit any crime and destroy their families and their own lives. This is true even though cocaine's effects last only up to 90 minutes, while meth wears off after eight hours. Meth addicts often display the following characteristics:

1. Nervous
2. Paranoid
3. Agitated
4. Perspiring
5. Pale
6. Red, watery, bloodshot eyes
7. Dilated pupils
8. Injection marks
9. Poor concentration
10. Body tremors
11. Rapid speech
12. Open sores on face and arms
13. Bad teeth
14. Teeth damaged by grinding

Methamphetamine Production Equipment

1. Coffee Pot
2. Pyrex baking dishes
3. Blender
4. Coffee Grinder
5. Heating mantle or hot plate
6. Coffee Filters
7. Ph paper
8. Funnels

Ingredients

1. Decongestant pills containing pseudo-ephedrine
2. Red phosphoreus
3. Iodine
4. Charcoal lighter fluid
5. Coleman stove fuel
6. Acetone
7. Isopropyl alcohol
8. Ether
9. Muriatic acid
10. Red Devil Lye
11. Distilled Water

Hazards of meth production

The cost to government and landowners of cleaning up contaminated sites is astronomical. The environmental hazards pose one of the greatest threats to law enforcement officers and to the tenants who unknowingly live in contaminated dwellings.
